9 2011/3/2 Digital Signal Processing 17 Classification of Discrete-Time Signals Energy signals and power signals The total energy of a signal $x(n)$ is defined by An infinite length sequence with finite sample values may or may not be an energy signal (with finite energy) The average power of a discrete-time signal $x[n]$ is defined by Define the signal energy of $x(n)$ over the finite interval

An Introduction to Discrete-Time Signal Processing

Section 122, we recall the discrete-time Fourier transform for discrete-time, aperiodic signals The duality between these two situations is then readily apparent In Section 123, we motivate the continuous-time Fourier transform by examining the limiting form of the Fourier-series representation of truncations of the time signal 121
